

CS/ECE 252: INTRODUCTION TO COMPUTER ENGINEERING

UNIVERSITY OF WISCONSIN—MADISON

Prof. Gurindar Sohi

TAs: Lisa Ossian, Minsub Shin, Sujith Surendran

Midterm Examination 3

In Class (50 minutes)

Friday, November 14, 2014

Weight: 17.5%

NO: BOOK(S), NOTE(S), OR CALCULATORS OF ANY SORT.

The exam has **nine** pages. **Circle your final answers.** Plan your time carefully since some problems are longer than others. You **must turn in the pages 1-8**. Use the blank sides of the exam for scratch work.

The LC-3 instruction set is provided on Page 9

LAST NAME: _____

FIRST NAME: _____

ID#: _____

Problem	Maximum Points	Points Earned
1	3	
2	2	
3	3	
4	3	
5	5	
6	7	
7	3	
8	4	
Total	30	

Problem 1

(3 points)

- a) Which of the following LC-3 instructions copies the value of R7 into R1?
- 1) 0001 001 111 1 11111
 - 2) 0101 001 111 1 11111
 - 3) 0101 111 001 1 11111
 - 4) 0001 111 001 1 00000
- b) Excluding the memory access to fetch the instruction, how many memory accesses are made to fetch and execute the LDI instruction?
- 1) 1
 - 2) 2
 - 3) 3
 - 4) 4
- c) The LC-3 branch instruction 0000 011 000001111 is located at memory address 0x3000. If the branch is taken, what does that imply about the values of the condition codes before the instruction executed?
- 1) Either N = 1 or P = 1, and Z = 0
 - 2) Either P = 1 or Z = 1, and N = 0
 - 3) Both P = 1 and Z = 1, and N = 0
 - 4) Both N = 1 and Z = 1, and P = 0

Problem 2

(2 points)

- a) **(1 point)** Write a *single* LC-3 instruction to load the number 0x4020 into R2. Assume that your instruction will be located at 0x4000.
- b) **(1 point)** Write a *single* LC-3 instruction to load the data stored at memory address 0x4020 into R3. Assume that your instruction will be located at 0x4001.

Problem 3**(3 points)**

The table below shows LC-3 instructions starting at 0x3000, which are executed in sequence. Specify the values at memory locations 0x300F to 0x3012 after executing each instruction.

Assume that the initial contents of R0 = 0x3010 and R1 = 0x3011. Also, assume that the initial values of the memory locations 0x300F to 0x3012 are all zeros.

Address	LC-3 Instruction	Values at memory locations after executing the instruction
0x3000	0011 000 000001111	Value at 0x300F: Value at 0x3010: Value at 0x3011: Value at 0x3012:
0x3001	0111 001 000 000010	Value at 0x300F: Value at 0x3010: Value at 0x3011: Value at 0x3012:
0x3002	1011 001 00001110	Value at 0x300F: Value at 0x3010: Value at 0x3011: Value at 0x3012:

Problem 4**(3 points)**

Assume that the following two LC-3 instructions are a part of a large program:

```
0001 000 000 1 11111
0000 010 000000001
```

- a) **(2 points)** If the second instruction (which is a branch) is taken, what can you tell about the value of R0 just before executing these two instructions?
- b) **(1 point)** If the branch instruction is located at address 0x3000, specify the range of addresses to which you can branch using this instruction.

Problem 5**(5 points)**

Consider the LC-3 program below.

Address	Instruction	Comment
0x4000	0101 100 100 1 00000	
0x4001	0001 011 011 1 11011	
0x4002	0101 011 011 1 11111	
0x4003	0000 1 0 0 000000010	
0x4004	0001 100 100 1 11110	R4 ← R4 - 2
0x4005	0000 1 1 1 111111000	Branch if N, Z, or P is set to address 0x4001
0x4006	1111 0000 00000000	HALT

- a) **(2 points)** Fill in the four missing comments in the program above.
- b) **(1 point)** If the initial value of R3 is 0x0033, what is the value of R4 when the HALT instruction is reached?
- c) **(1 point)** If the initial value of R3 is 0x0004, what is the value of R4 when the HALT instruction is reached?
- d) **(1 point)** What is the minimum value of R3 that causes the value of R4 to be -8 upon reaching the HALT instruction?

Problem 6**(7 points)**

We are about to execute the program below. Assume the condition codes before execution of the program are N=1, Z=0, P=0.

Address	Instruction	Comments
0x3000		Store R0 into memory location 0x300D
0x3001		If n flag is set, branch to 0x3005
0x3002		Subtract 5 from R0 and store the result in R0
0x3003	0101 010 010 0 00 000	R2 <- R2 AND R0
0x3004	1111 0000 00000000	HALT
0x3005	1010 010 000000100	LDI: Load the value from a memory location, whose address is stored in location 0x300A, into R2
0x3006	1111 0000 00000000	HALT

- a) **(3 points)** Fill in the three missing instructions in the program above.
- b) **4 points)** Suppose a section in memory before execution of the program is as follows:

Address	Value
0x300A	0x300D
0x300B	0x300F
0x300C	0xACED
0x300D	0x300B

Given the initial values of the below registers, fill in the values after the program has completed execution (i.e., reached a HALT). Give your answers in **hex**.

Register	Initial Value	Final Value
MAR	0X300B	
MDR	0xABCD	
R0	0x5555	
R1	0x300D	
R2	0x300A	

Problem 8

(4 points)

Assume that your friend John has written a large LC-3 program which is working correctly. Column A in the table below shows 4 sets of instructions which are part of his working program. Now, suppose you replaced one set of instructions in Column A with the corresponding set of instructions in Column B. Without making assumptions about any register or memory location, specify if the program is still guaranteed to work correctly. Justify your answer.

Set #	Column A	Column B
1	0101 000 000 1 00000 (R0 <- R0 AND 0) 0101 001 001 1 00000 (R1 <- R1 AND 0) 0000 010 000000010 (Branch if Z to PC'+2)	0101 001 001 1 00000 (R1 <- R1 AND 0) 0101 000 000 1 00000 (R0 <- R0 AND 0) 0000 010 000000010 (Branch if Z to PC'+2)
	Answer/Justification:	
2	0001 000 000 1 11111 (R0 <- R0 - 1) 0001 001 001 1 11111 (R1 <- R1 - 1) 0000 010 000000010 (Branch if Z to PC'+2)	0001 001 001 1 11111 (R1 <- R1 - 1) 0001 000 000 1 11111 (R0 <- R0 - 1) 0000 010 000000010 (Branch if Z to PC'+2)
	Answer/Justification:	
3	0001 000 000 1 11111 (R0 <- R0 - 1) 0011 001 000000011 (R1 <- Mem[PC'+3])	0011 001 000000011 (R1 <- Mem[PC'+3]) 0001 000 000 1 11111 (R0 <- R0 - 1)
	Answer/Justification:	
4	0001 000 001 1 11111 (R0 <- R1 - 1) 0111 001 001 000011 (R1 <- Mem[R1]+3)	0111 001 001 000011 (R1 <- Mem[R1]+3) 0001 000 001 1 11111 (R0 <- R1 - 1)
	Answer/Justification:
