# CS/ECE 252: INTRODUCTION TO COMPUTER ENGINEERING 

## UNIVERSITY OF WISCONSIN—MADISON

Instructor: Rahul Nayar

TAs: Annie Lin, Mohit Verma

## Examination 3

In Class (50 minutes)
Wednesday, April 7, 2017
Weight: 17.5\%

NO: BOOK(S), NOTE(S), CALCULATORS OR ELECTRONIC DEVICES OF ANY SORT.
The exam has ten pages. You must turn in the pages 1-9. Circle your final answers. Plan your time carefully since some problems are longer than others. Use the blank sides of the exam for scratch work.

LAST NAME: $\qquad$
FIRST NAME: $\qquad$
ID\#: $\qquad$

| Problem | Maximum Points | Points Earned |
| :---: | :---: | :---: |
| 1 | 3 |  |
| 2 | 3 |  |
| 3 | 4 |  |
| 4 | 5 |  |
| 4 | 3 |  |
| 6 | 3 |  |
| 7 | 26 |  |
| Total | 3 |  |

## Problem 1

Write all the missing comments for the LC-3 binary code shown in the table below. (3 points)

| Address | Instruction | Comment |
| :---: | :---: | :---: |
| $0 \times 3000$ | 0010000000101011 | R0 <- M[0x302C] |
| $0 \times 3001$ | 0010001000101011 |  |
| $0 \times 3002$ | 1001011001111111 | R3 <- NOT (R1) |
| $0 \times 3003$ | 0001011011100001 |  |
| $0 \times 3004$ | 0001010000000 |  |
| $0 \times 3005$ | 0000100000000010 | R2 <- R0 + R3 |
| $0 \times 3006$ | 0011000000100111 |  |
| $0 \times 3007$ | 0000111000000001 |  |
| $0 \times 3008$ | 0011001000100101 |  |
| $0 \times 3009$ | 1111000000100101 | HALT |

## Problem 2

Given the initial values at the following registers and memory locations, fill in the values at the memory locations below after each instruction is executed. The instructions are executed in order. So, instruction at location $\times 4000$ has finished execution before instruction at x4001 begins, and so on. You may assume that all other registers and memory locations are set to 0.

| Address | Initial Memory Values |
| :--- | :--- |
| R0 | x4021 |
| R1 | $x 4022$ |
| R2 | $x 4023$ |
| x4020 | $x 4021$ |
| x4021 | x4022 |
| x4022 | xFFFE |

| Address | LC-3 Binary Instruction | Values at memory locations after execution |
| :--- | :--- | :--- |

| $x 4000$ | $0110 \quad 010000000001$ | Value at $x 4020:$ <br> Value at $x 4021:$ <br> Value at $x 4022:$ |
| :--- | :--- | :--- | :--- | :--- |
| $\times 4001$ | 0001 <br> 001 001010000 | Value at $x 4020:$ <br> Value at $x 4021:$ <br> Value at $x 4022:$ |
| $x 4002$ | 0111010001000000 | Value at $x 4020:$ <br> Value at $x 4021:$ <br> Value at $x 4022:$ |

Problem 3 The following pseudo-code presents an algorithm to check if the data present in R1 is greater than 3. The table below shows an incomplete LC-3 binary program that implements this logic. Assume that R1 has been initialized to the data value being checked.

$$
\begin{aligned}
& \text { R1 }=R 1-3 \\
& \text { R2 }=0 \\
& \text { If } \mathrm{R} 1>0 \text { then: } \\
& \quad \text { R2 }=1 \\
& \text { end if } \\
& \text { HALT }
\end{aligned}
$$

Assume PC is $x 3000$ when execution of the program starts.

| Address | Instruction |
| :---: | :---: |
| $0 \times 3000$ | 0101010010100000 |
| $0 \times 3001$ |  |
| $0 \times 3002$ | 0001010010100001 |
| $0 \times 3003$ | 1111000000100101 |
| $0 \times 3004$ |  |

a) Complete the code to implement the algorithm in the above table by filling in the missing LC-3 binary instructions in memory locations $0 \times 3001$ and $0 \times 3002$.
b) By looking at the algorithm logic above, a student incorrectly concludes that if R2 $=$ 1 at the end of program execution, the value in R1 at program start must be greater than 3. Provide at least one example of a value in R1 for which the above conclusion is incorrect.
c) Which of the following programming construct does the above algorithm use?
i) Iterative
ii) Conditional

## Problem 4

a) Briefly explain what the following LC-3 instruction does:

0000111000000000
b) Which of the following instructions does not change the condition code of LC-3 after execution? You must explain your answer for full credit.
a) 0001010000000001
b) $0110011010 \quad 000011$
c) 0111011010000011
d) 1010110000000011
c) How many memory accesses does the STI instruction in LC-3 ISA make? You must explain your answer for full credit.
d) Briefly explain the difference between syntax errors and logical errors.
e) The following instruction is located in memory at $0 \times 3000$.

000011100000111
What is the value of $P C$ after the instruction finishes execution? Assume $n=1, z=0, p=0$ before the instruction begins execution.

## Problem 5

The following table shows an incomplete program located in memory. Assume PC $=x 3000$ before the program starts execution.

| Address | Instruction | Comments |
| :---: | :---: | :---: |
| $0 \times 3000$ |  | R1 <- NOT (R1) |
| $0 \times 3001$ |  | R2 <- NOT (R2) |
| $0 \times 3002$ |  | R3 <- R1 AND R2 |
| $0 \times 3003$ | 1001011011111111 | R3 <- NOT R3 |

| $0 \times 3004$ |  | $\mathrm{M}[\times 4000]<-\mathrm{R} 3$ |
| :---: | :---: | :---: |
| $0 \times 3005$ | 1111000000100101 | HALT |
| $0 \times 3006$ | 0100000000000000 | . FILL $\times 4000$ |

a) Fill in the missing LC-3 binary instructions from the comments provided.
b) The following table shows the values in select registers and condition flags before the execution of the above program begins. Write the values in these locations just after the program finishes execution (i.e. after HALT has finished execution).

| Register/Condition flag | Value before execution <br> starts | Value after execution <br> completes |
| :---: | :---: | :---: |
| R1 | $0 \times 000 \mathrm{~A}$ |  |
| R2 | $0 \times 000 \mathrm{~B}$ |  |
| R3 | $0 \times 0000$ |  |
| n | 1 |  |
| p | 0 |  |
| z | 0 |  |
| $M[\times 4000]$ | $0 \times 0000$ |  |

## Problem 6

a) Write a single LC-3 instruction to load the number x2FF0 into R5. Your instruction will be located at $\times 3000$.
b) Write a single LC-3 instruction to store the data from register R3 into memory address $\times 4010$. Your instruction will be located at $\times 4000$.
c) Write up to two LC-3 instructions that will subtract the number 30 from R2 and place the result in R3.

## Problem 7

The tables below show the contents of a few memory locations and registers before and after an LC-3 instruction at location x2000 is executed. Identify the instruction located at $\mathbf{x 2 0 0 0}$ given the information below. Write its LC-3 16-bit binary form and comment what it does. Explain how you arrived at your answer for full credit.

|  | Before | After |
| :--- | :--- | :--- |
| R0 | xFF35 | xFF35 |
| R1 | xF911 | xF911 |
| R2 | x67F9 | x0146 |
| R3 | x0912 | x0912 |
| R4 | x8231 | x82331 |
| R5 | x0901 | xE981 |
| R6 | x1091 | x0901 |
| R7 | x7684 | x3040 |
| x304D | x0146 | x1091 |
| x304E | $x$ xFFF | x7684 |
| x304F | x1021 | x0146 |
| x3050 | x99DF | $x E F F F$ |
| x3051 | x4782 | x1021 |
| x3052 | x99DF |  |
| x3053 | x4782 |  |
