Review: Multiple Input Channels

- Input and kernel can be 3D, e.g., an RGB image have 3 channels
- Have a kernel for each channel, and then sum results over channels

Pooling Layer

2-D Max Pooling

- Returns the maximal value in the sliding window

$$\max(0, 1, 3, 4) = 4$$

Average Pooling

- Max pooling: the strongest pattern signal in a window
- Average pooling: replace max with mean in max pooling
 - The average signal strength in a window

Max pooling

Average pooling

How to train a neural network?

Loss function: $\frac{1}{|D|} \sum_i \ell(\mathbf{x}_i, y_i)$

Per-sample loss:

$$\ell(\mathbf{x}, y) = \sum_{j=1}^K -y_j \log p_j$$

**Also known as cross-entropy loss
or softmax loss**

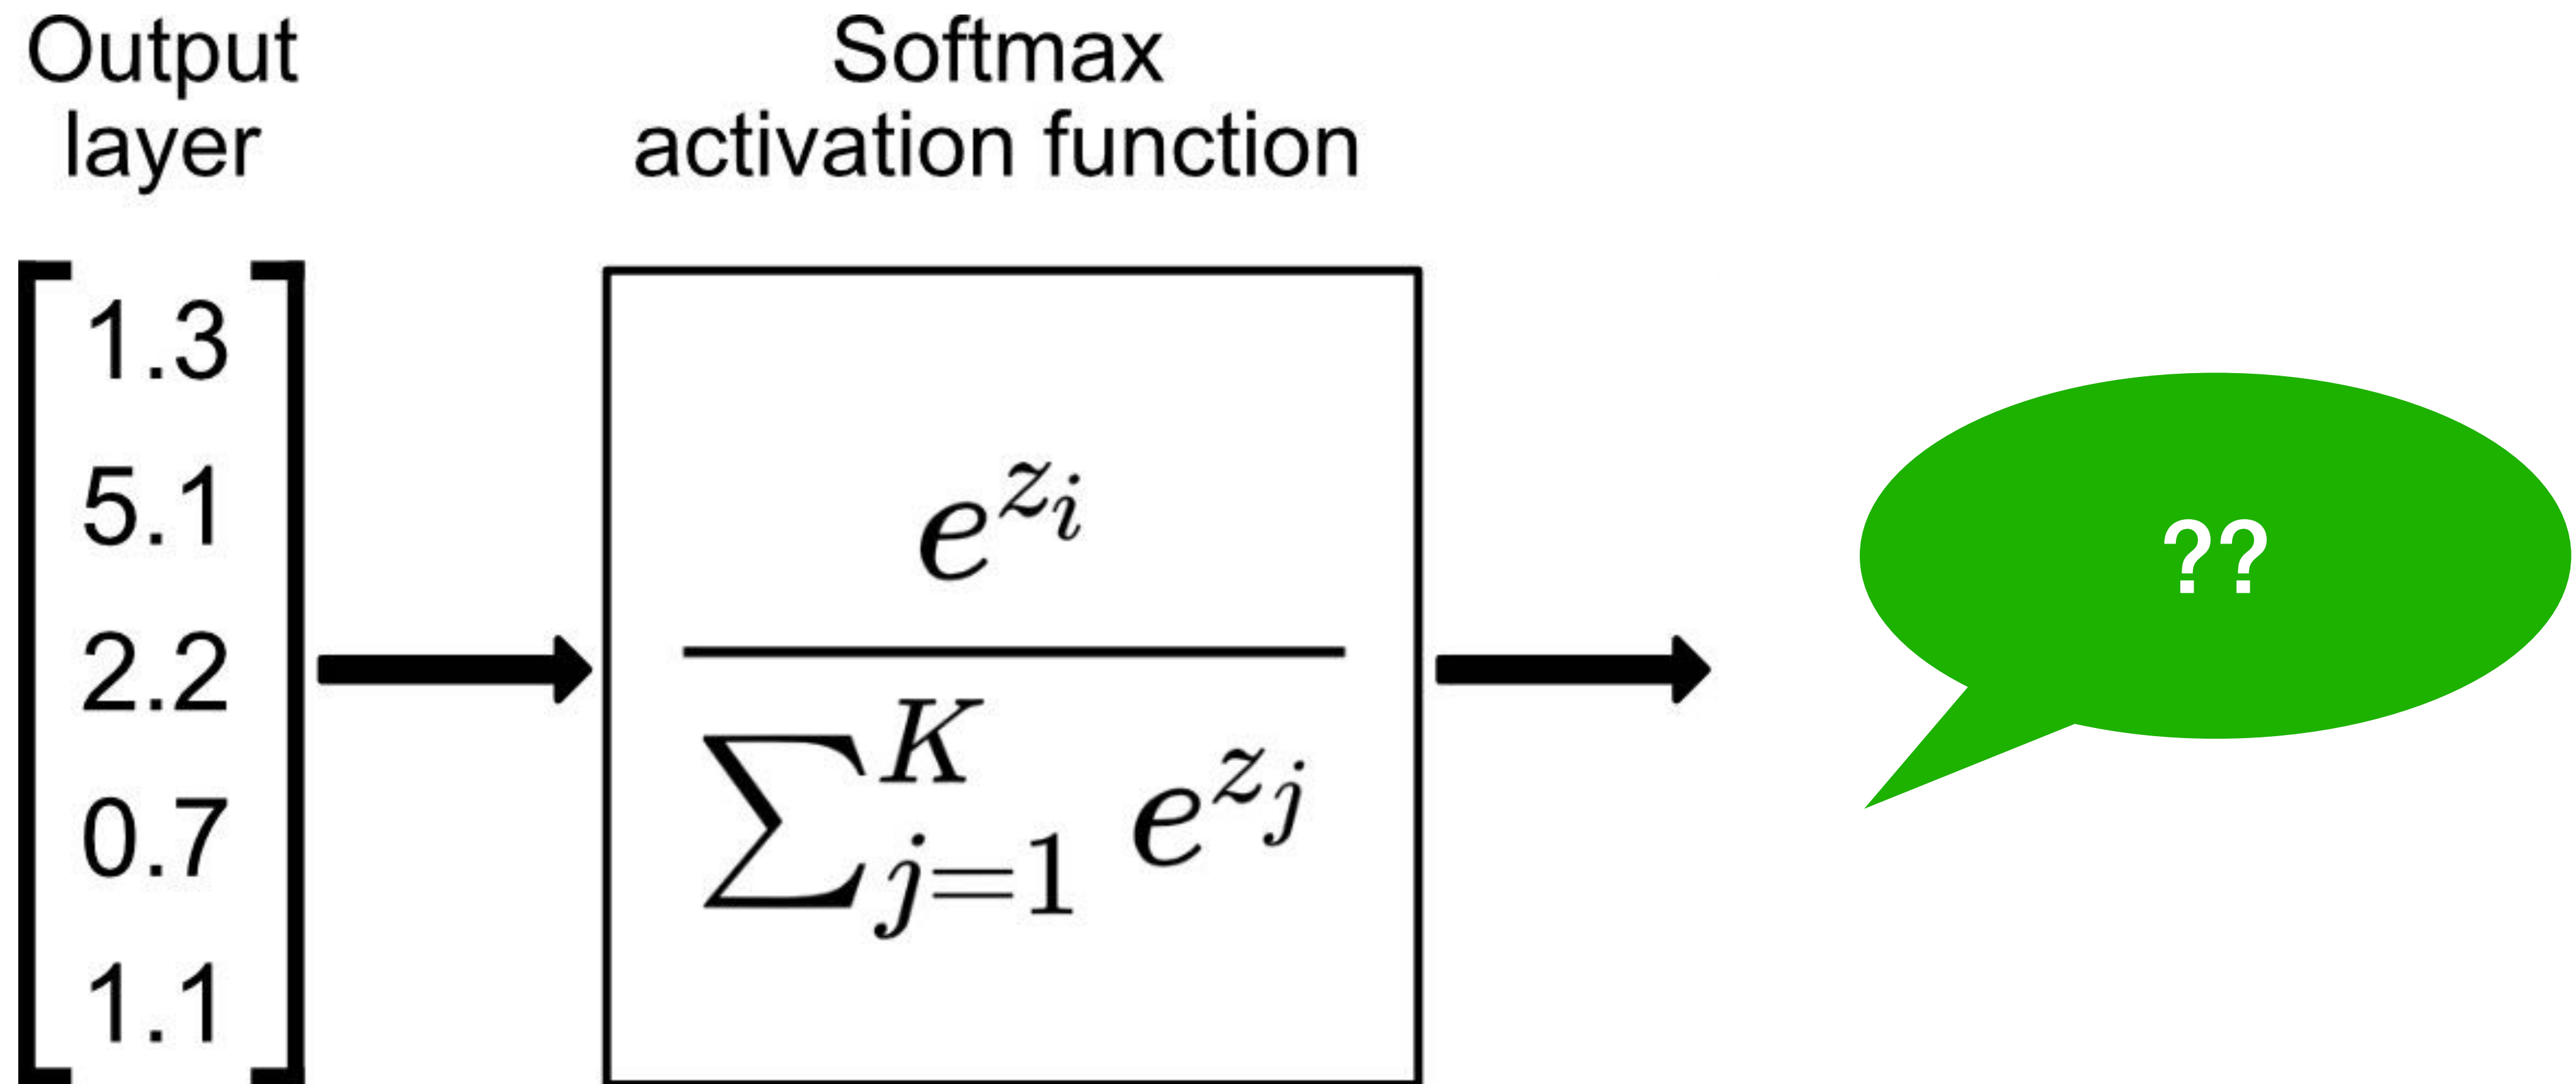

How to train a convolutional neural network?

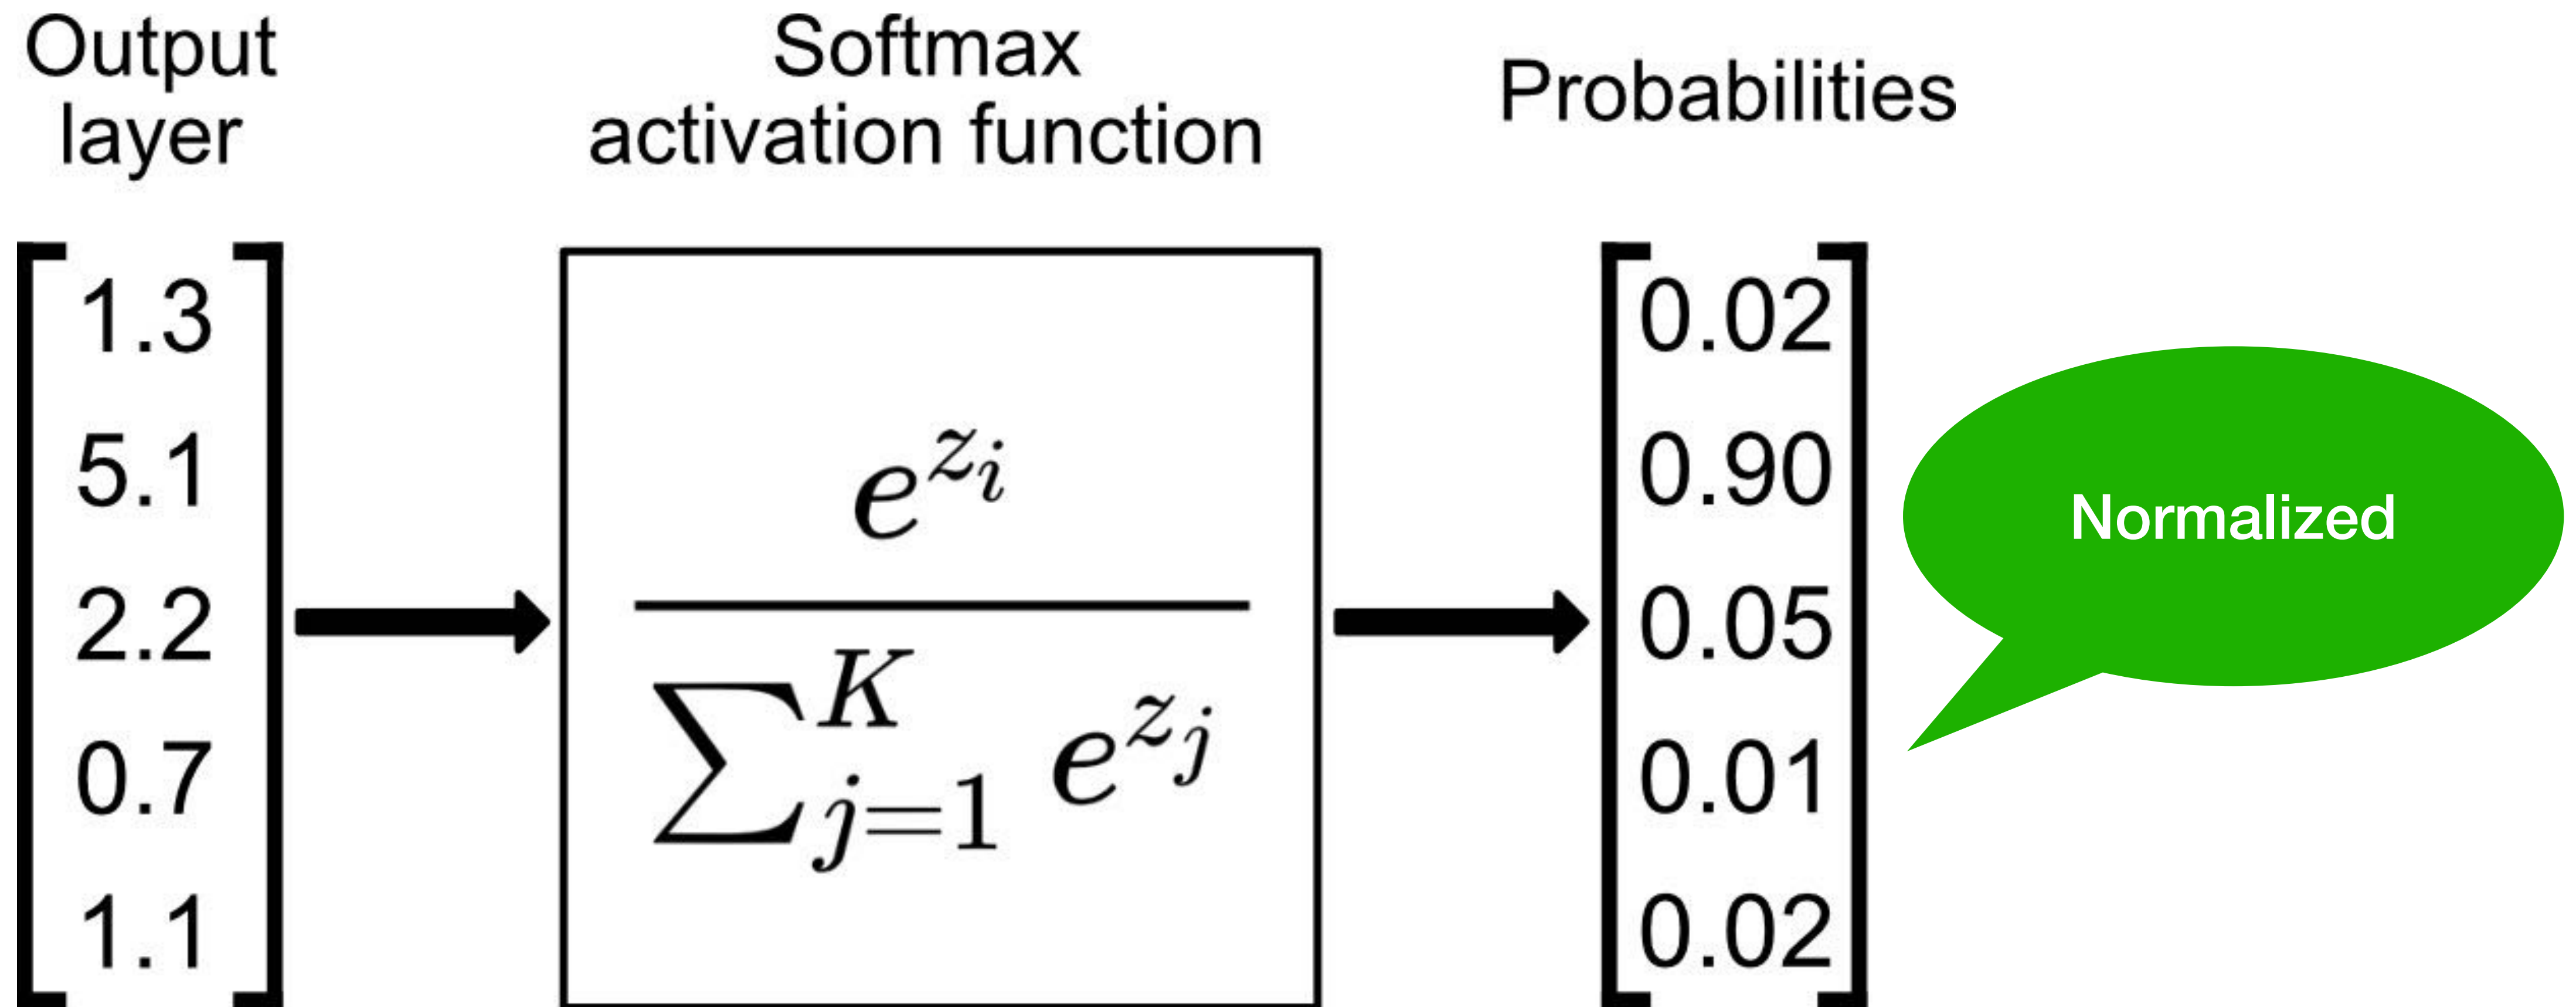

Recall Softmax

Turns outputs f into probabilities (sum up to 1 across k classes)

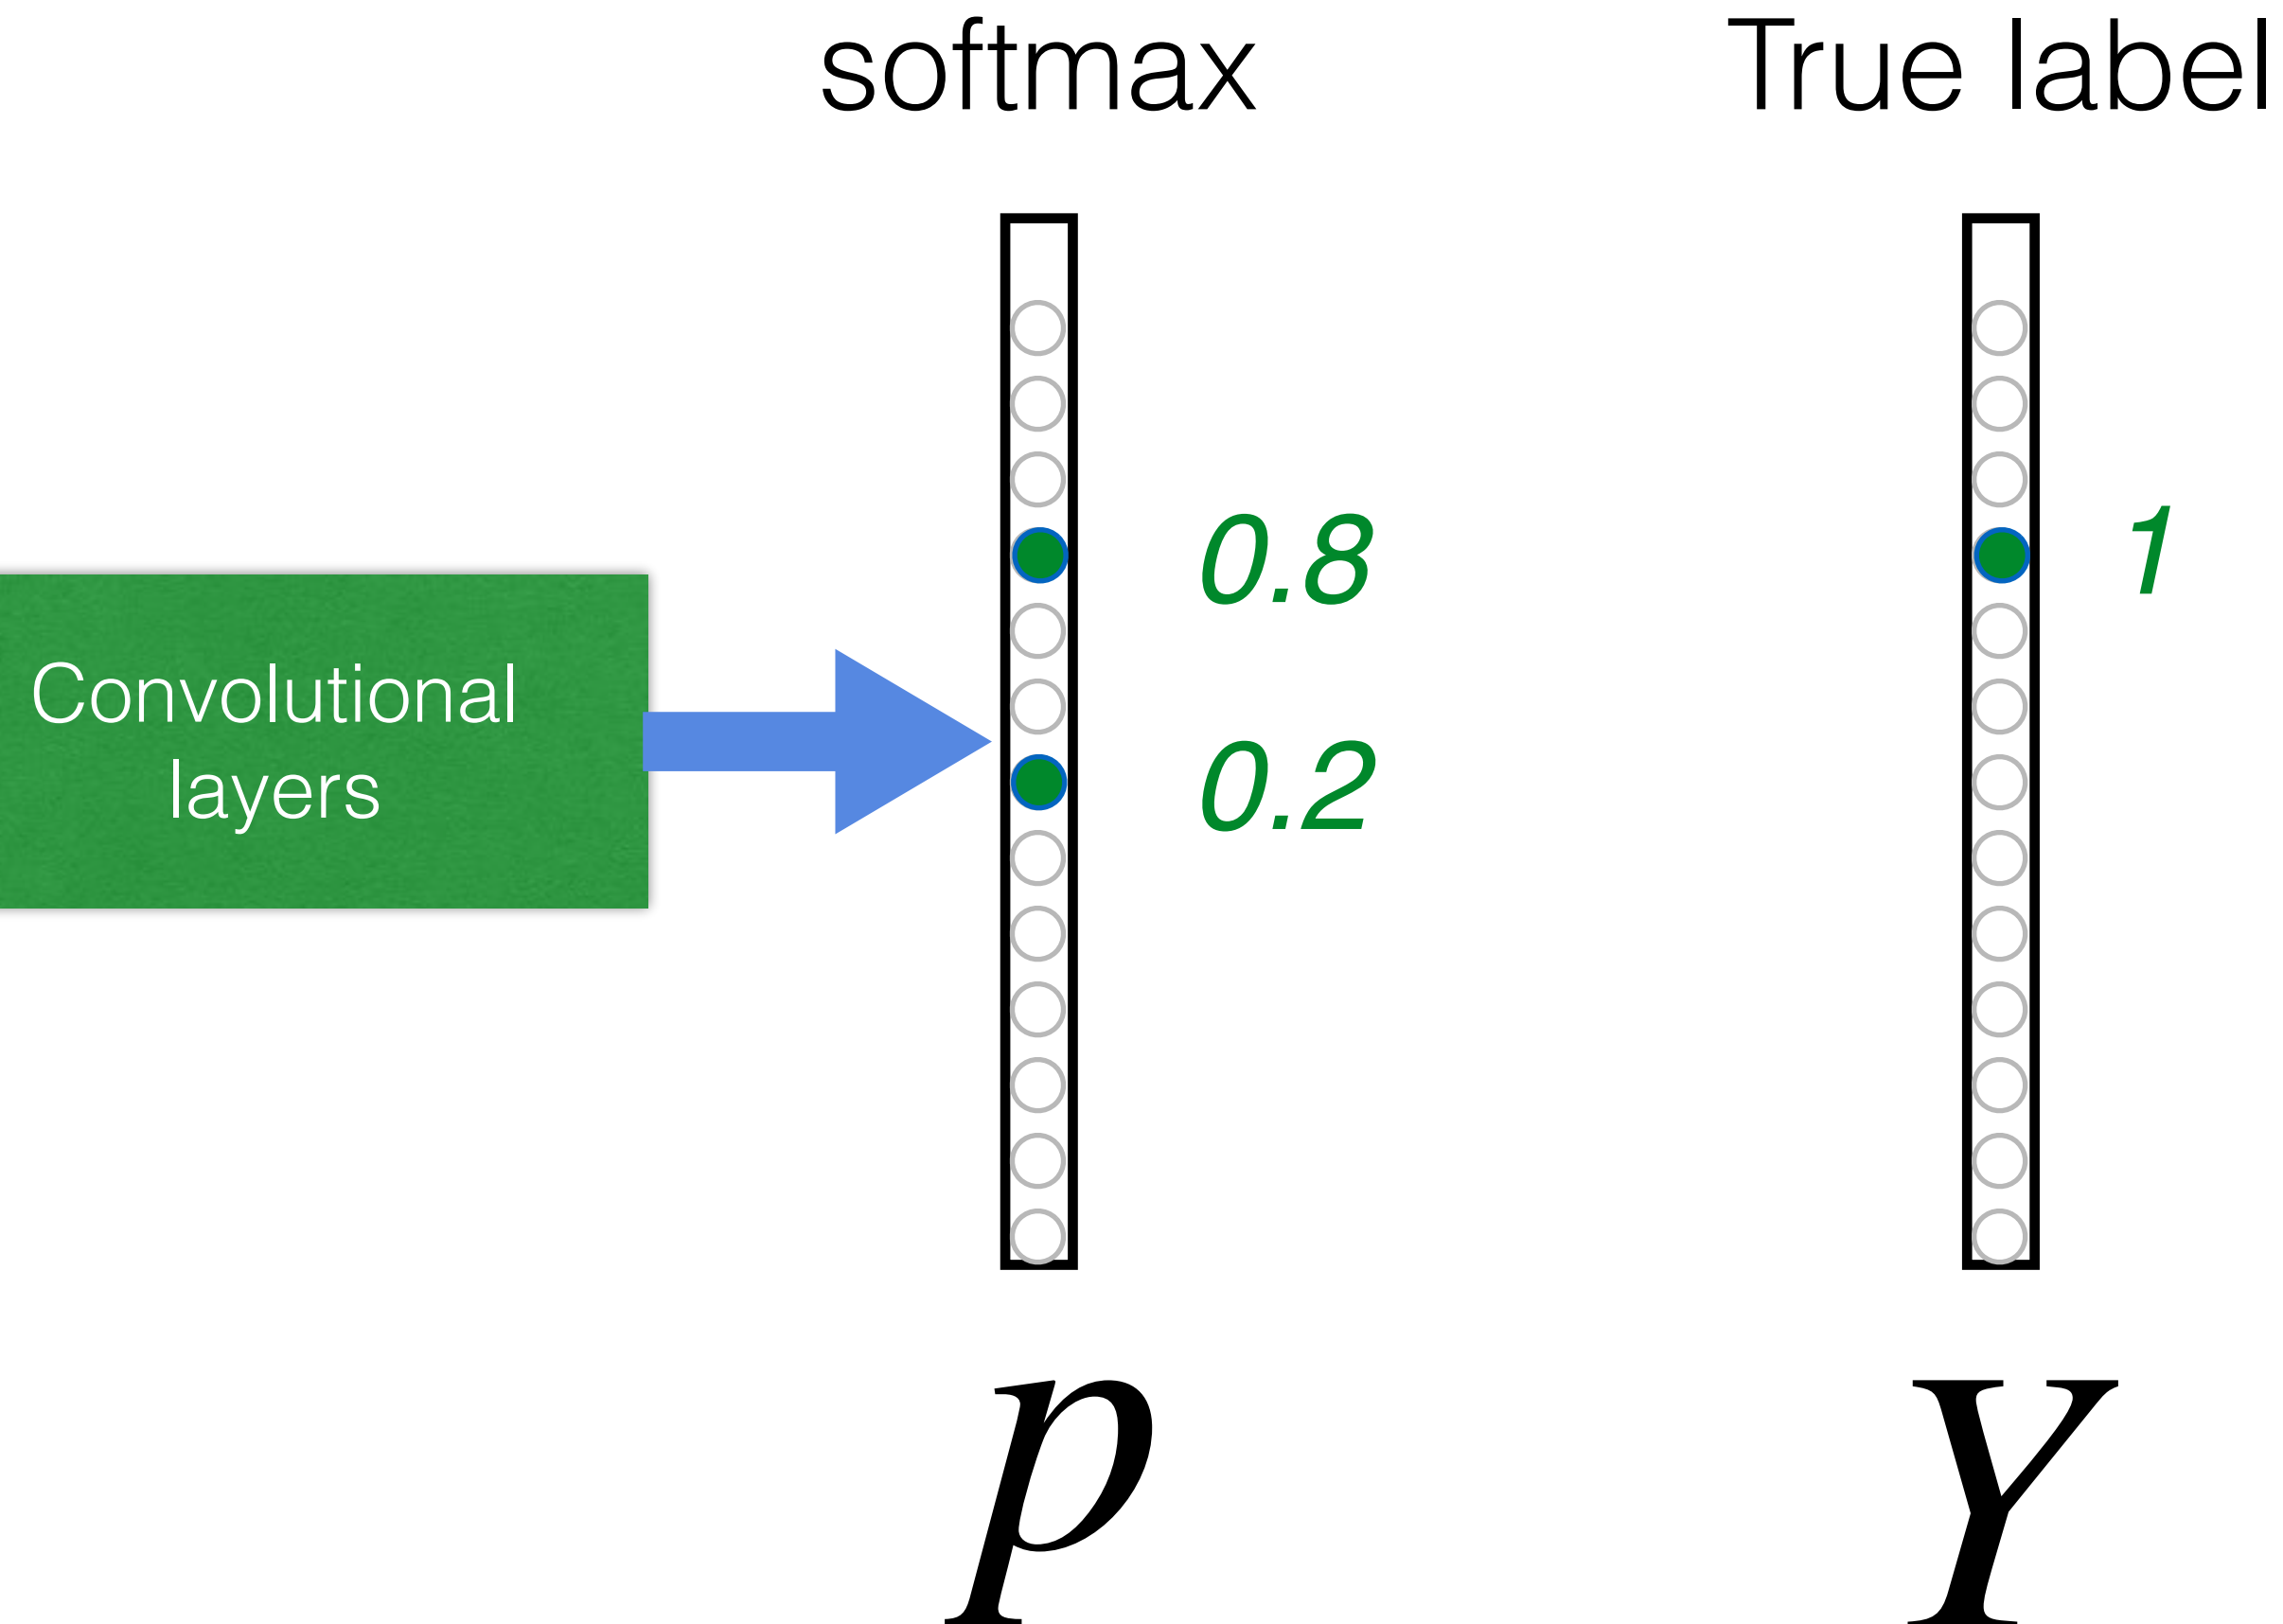

Recall Softmax

Turns outputs f into probabilities (sum up to 1 across k classes)

Cross-Entropy Loss

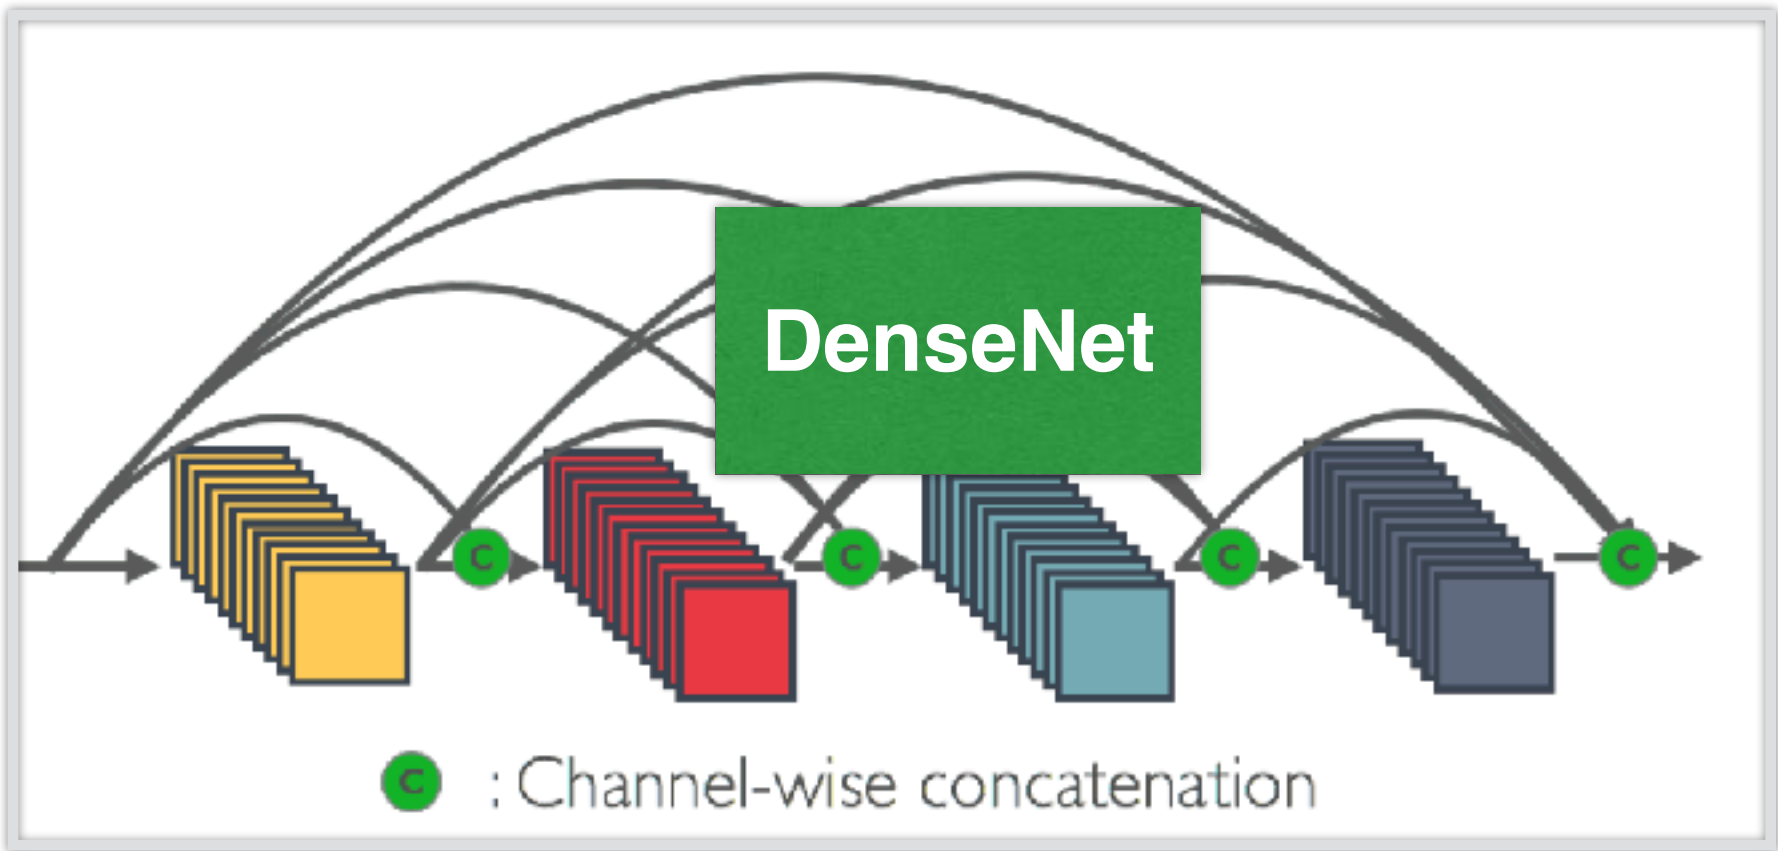

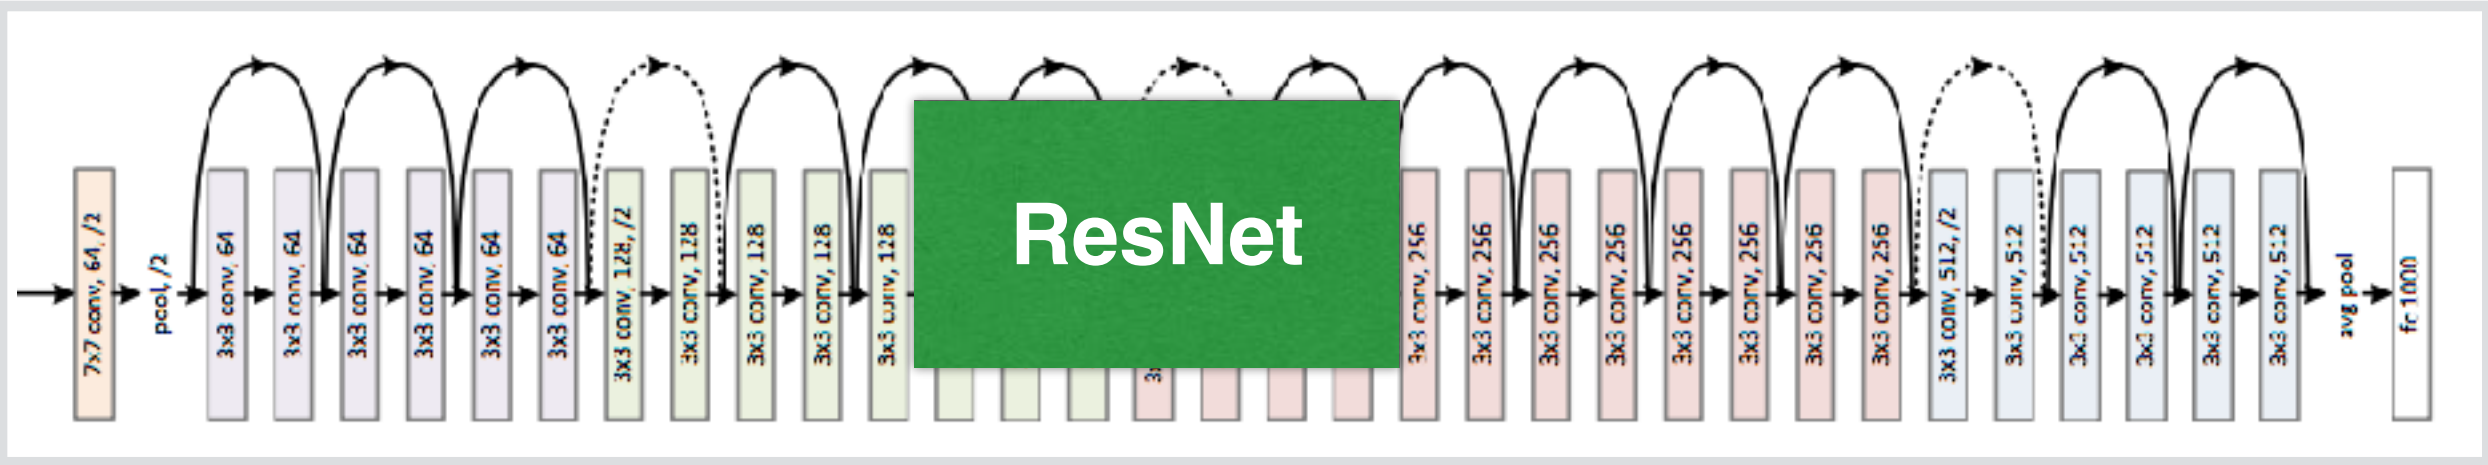

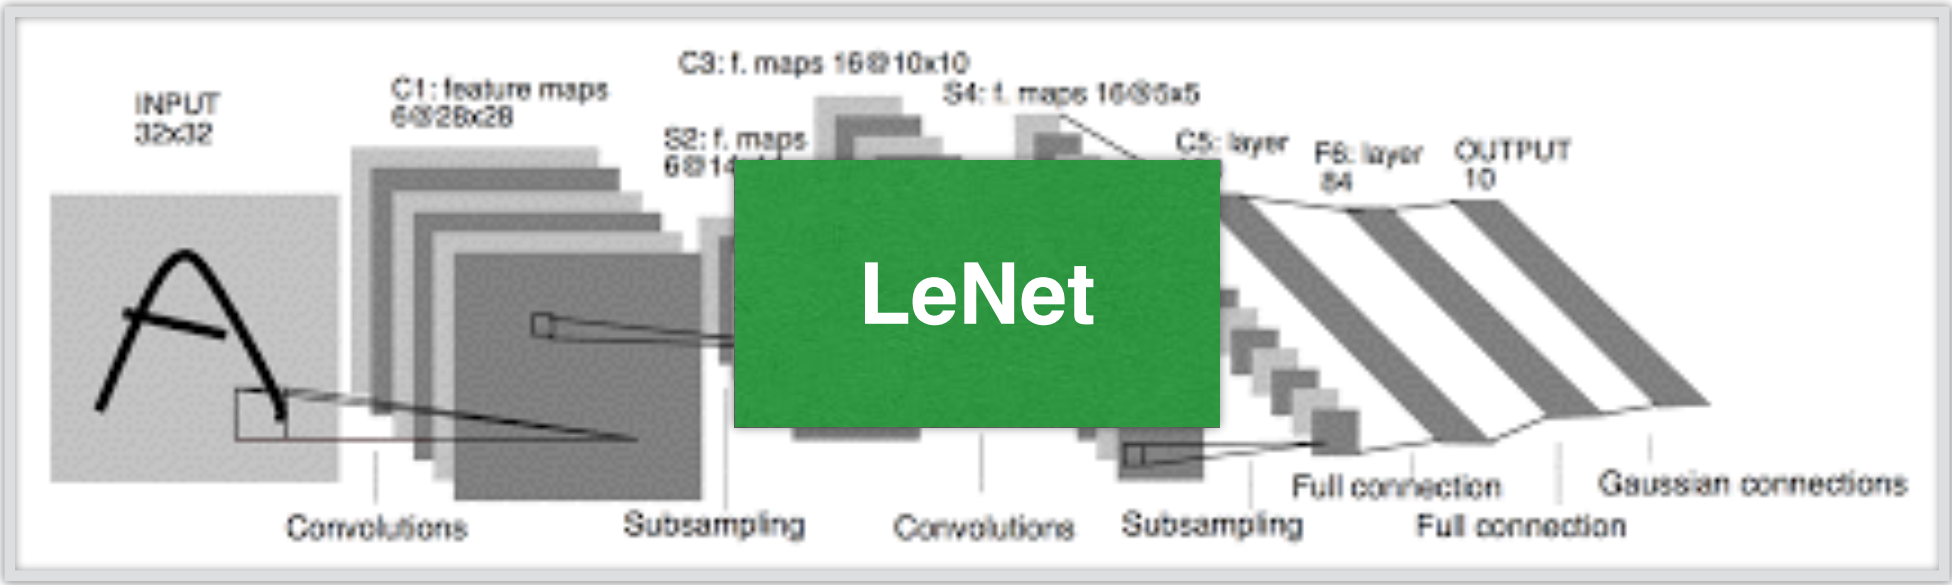

$$L_{CE} = \sum_i -Y_i \log(p_i)$$
$$= -\log(0.8)$$

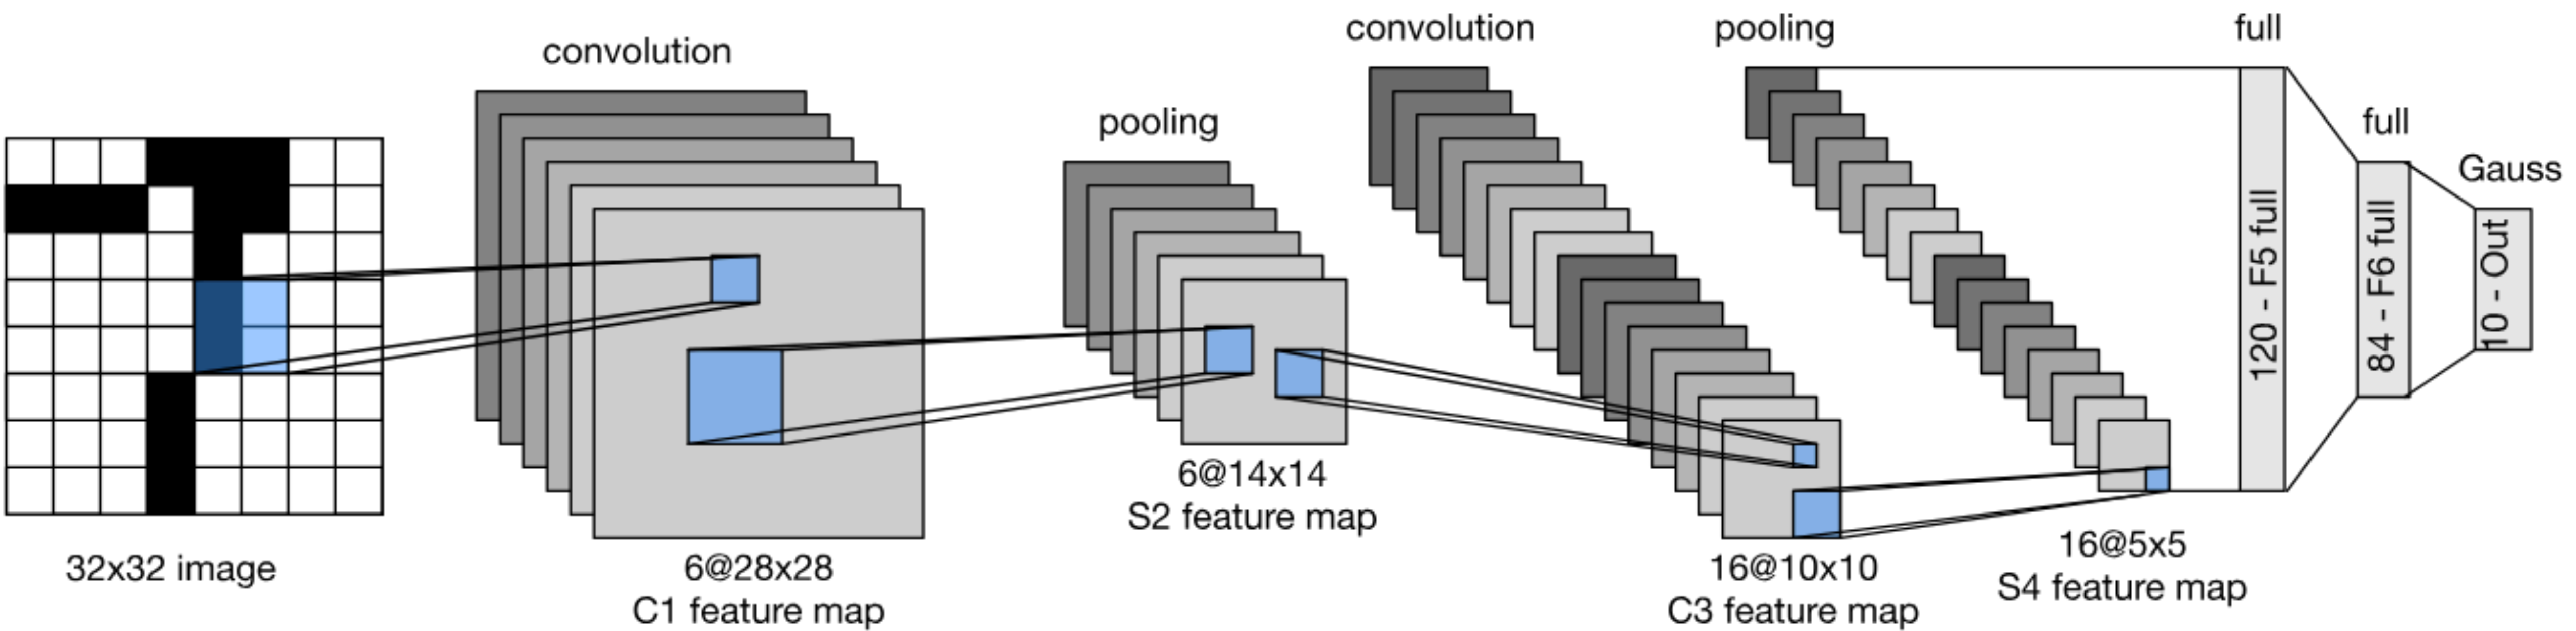

Goal: push \mathbf{p} and \mathbf{Y} to be identical
