

# CS 540 Introduction to Artificial Intelligence

## **Unsupervised Learning I**

Yingyu Liang  
University of Wisconsin-Madison  
Oct 5, 2021

Based on slides by Fred Sala

# Recap of Supervised/Unsupervised

## Supervised learning:

- Make predictions, classify data, perform regression
- Dataset:  $(\mathbf{x}_1, y_1), (\mathbf{x}_2, y_2), \dots, (\mathbf{x}_n, y_n)$

Features / Covariates / Input

Labels / Outputs

- Goal: find function  $f : X \rightarrow Y$  to predict label on **new** data

indoor

outdoor

# Recap of Supervised/Unsupervised

## Unsupervised learning:

- No labels; generally won't be making predictions
- Dataset:  $x_1, x_2, \dots, x_n$
- Goal: find patterns & structures that help better understand data.

Mulvey and Gingold

# Recap of Supervised/Unsupervised

Note that there are **other kinds** of ML:

- Mixtures: semi-supervised learning, self-supervised
  - Idea: different types of “signal”
- Reinforcement learning
  - Learn how to act in order to maximize rewards
  - Later on in course...

DeepMind

# Outline

- Intro to Clustering
  - Clustering Types, Centroid-based, k-means review
- Hierarchical Clustering
  - Divisive, agglomerative, linkage strategies

# Unsupervised Learning & Clustering

- Note that clustering is just one type of unsupervised learning (**UL**)
  - PCA is another unsupervised algorithm
- Estimating probability distributions also UL (GANs)
- Clustering is popular & useful!

StyleGAN2 (Kerras et al '20)

# Clustering Types

- Several types of clustering

## Partitional

- Centroid
- Graph-theoretic
- Spectral

## Hierarchical

- Agglomerative
- Divisive

## Bayesian

- Decision-based
- Nonparametric

# Center-based Clustering

- k-means is an example of partitional **center-based**
- Recall steps: **1.** Randomly pick k cluster centers

# Center-based Clustering

- **2.** Find closest center for each point

# Center-based Clustering

- **3.** Update cluster centers by computing centroids

# Center-based Clustering

- Repeat Steps 2 & 3 until convergence

# Break & Quiz

**Q 1.1:** You have seven 2-dimensional points. You run 3-means on it, with initial clusters

$$C_1 = \{(2, 2), (4, 4), (6, 6)\}, C_2 = \{(0, 4), (4, 0)\}, C_3 = \{(5, 5), (9, 9)\}$$

Cluster centroids at the next iteration are?

- A.  $C_1: (4,4)$ ,  $C_2: (2,2)$ ,  $C_3: (7,7)$
- B.  $C_1: (6,6)$ ,  $C_2: (4,4)$ ,  $C_3: (9,9)$
- C.  $C_1: (2,2)$ ,  $C_2: (0,0)$ ,  $C_3: (5,5)$
- D.  $C_1: (2,6)$ ,  $C_2: (0,4)$ ,  $C_3: (5,9)$

# Break & Quiz

**Q 1.1:** You have seven 2-dimensional points. You run 3-means on it, with initial clusters

$$C_1 = \{(2, 2), (4, 4), (6, 6)\}, C_2 = \{(0, 4), (4, 0)\}, C_3 = \{(5, 5), (9, 9)\}$$

Cluster centroids at the next iteration are?

- **A.  $C_1: (4,4)$ ,  $C_2: (2,2)$ ,  $C_3: (7,7)$**
- B.  $C_1: (6,6)$ ,  $C_2: (4,4)$ ,  $C_3: (9,9)$
- C.  $C_1: (2,2)$ ,  $C_2: (0,0)$ ,  $C_3: (5,5)$
- D.  $C_1: (2,6)$ ,  $C_2: (0,4)$ ,  $C_3: (5,9)$

# Break & Quiz

**Q 1.2:** We are running 3-means again. We have 3 centers,  $C_1$  (0,1),  $C_2$  (2,1),  $C_3$  (-1,2). Which cluster assignment is possible for the points (1,1) and (-1,1), respectively? Ties are broken arbitrarily:

(i)  $C_1, C_1$  (ii)  $C_2, C_3$  (iii)  $C_1, C_3$

- A. Only (i)
- B. Only (ii) and (iii)
- C. Only (i) and (iii)
- D. All of them

# Break & Quiz

**Q 1.2:** We are running 3-means again. We have 3 centers,  $C_1$  (0,1),  $C_2$  (2,1),  $C_3$  (-1,2). Which cluster assignment is possible for the points (1,1) and (-1,1), respectively? Ties are broken arbitrarily:

(i)  $C_1, C_1$  (ii)  $C_2, C_3$  (iii)  $C_1, C_3$

- A. Only (i)
- B. Only (ii) and (iii)
- C. Only (i) and (iii)
- **D. All of them**

# Break & Quiz

**Q 1.3:** If we run K-means clustering twice with random starting cluster centers, are we guaranteed to get same clustering results? Does K-means always converge?

- A. Yes, Yes
- B. No, Yes
- C. Yes, No
- D. No, No

# Break & Quiz

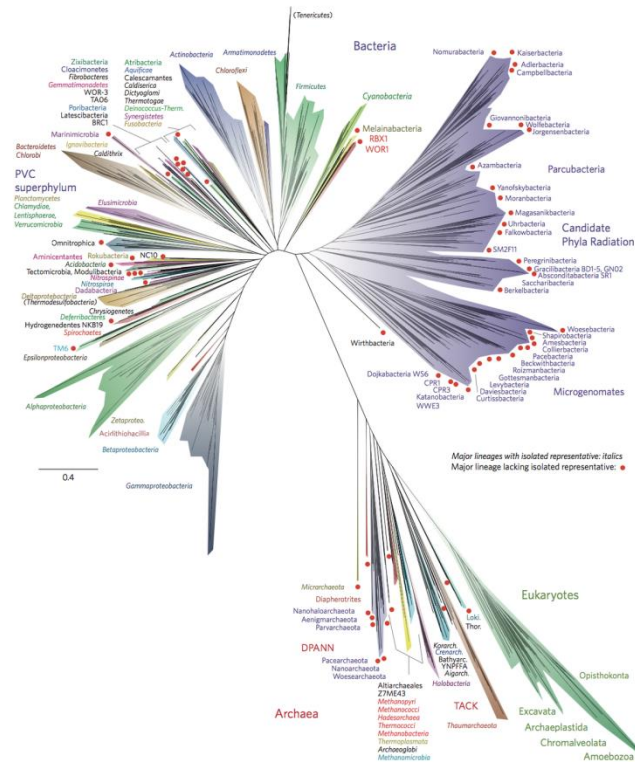

**Q 1.3:** If we run K-means clustering twice with random starting cluster centers, are we guaranteed to get same clustering results? Does K-means always converge?

- A. Yes, Yes
- **B. No, Yes**
- C. Yes, No
- D. No, No

# Hierarchical Clustering

Basic idea: build a “hierarchy”

- Want: arrangements from specific to general
- One advantage: no need for k, number of clusters.
- **Input:** points. **Output:** a hierarchy
  - A binary tree

Credit: Wikipedia

# Agglomerative vs Divisive

Two ways to go:

- **Agglomerative:** bottom up.
  - Start: each point a cluster. Progressively merge clusters
- **Divisive:** top down
  - Start: all points in one cluster. Progressively split clusters

# Agglomerative Clustering Example

**Agglomerative.** Start: every point is its own cluster

# Agglomerative Clustering Example

**Get** pair of clusters that are closest and merge

# Agglomerative Clustering Example

**Repeat:** Get pair of clusters that are closest and merge

# Agglomerative Clustering Example

**Repeat:** Get pair of clusters that are closest and merge

# Merging Criteria

Merge: use closest clusters. Define closest?

- Single-linkage

$$d(A, B) = \min_{x_1 \in A, x_2 \in B} d(x_1, x_2)$$

- Complete-linkage

$$d(A, B) = \max_{x_1 \in A, x_2 \in B} d(x_1, x_2)$$

- Average-linkage

$$d(A, B) = \frac{1}{|A||B|} \sum_{x_1 \in A, x_2 \in B} d(x_1, x_2)$$

# Single-linkage Example

We'll merge using single-linkage

- 1-dimensional vectors.
- Initial: all points are clusters

# Single-linkage Example

We'll merge using single-linkage

$$d(C_1, \{4\}) = d(2, 4) = 2$$

$$d(\{4\}, \{5\}) = d(4, 5) = 1$$

# Single-linkage Example

Continue...

$$d(C_1, C_2) = d(2, 4) = 2$$

$$d(C_2, \{7.25\}) = d(5, 7.25) = 2.25$$

# Single-linkage Example

Continue...

# Single-linkage Example

# Complete-linkage Example

We'll merge using complete-linkage

- 1-dimensional vectors.
- Initial: all points are clusters

# Complete-linkage Example

Beginning is the same...

$$d(C_1, C_2) = d(1, 5) = 4$$

$$d(C_2, \{7.25\}) = d(4, 7.25) = 3.25$$

# Complete-linkage Example

Now we diverge:

# Complete-linkage Example

# When to Stop?

No simple answer:

- Use the binary tree (a **dendrogram**)
- Cut at different levels (g different heights/depth.

# Break & Quiz

**Q 2.1:** Let's do hierarchical clustering for two clusters with average linkage on the dataset below. What are the clusters?

- A.  $\{1\}, \{2, 4, 5, 7.25\}$
- B.  $\{1, 2\}, \{4, 5, 7.25\}$
- C.  $\{1, 2, 4\}, \{5, 7.25\}$
- D.  $\{1, 2, 4, 5\}, \{7.25\}$

# Break & Quiz

**Q 2.1:** Let's do hierarchical clustering for two clusters with average linkage on the dataset below. What are the clusters?

- A.  $\{1\}, \{2, 4, 5, 7.25\}$
- **B.  $\{1, 2\}, \{4, 5, 7.25\}$**
- C.  $\{1, 2, 4\}, \{5, 7.25\}$
- D.  $\{1, 2, 4, 5\}, \{7.25\}$

# Break & Quiz

**Q 2.2:** If we do hierarchical clustering on  $n$  points, the maximum depth of the resulting tree is

- A. 2
- B.  $\log n$
- C.  $n/2$
- D.  $n-1$

# Break & Quiz

**Q 2.2:** If we do hierarchical clustering on  $n$  points, the maximum depth of the resulting tree is

- A. 2
- B.  $\log n$
- C.  $n/2$
- **D.  $n-1$**
