Motivation

Traditional Zhuyin input method on tablet has many existing problems now.

We hope to develop a easier way to use it, and make a progress on it.

Introduction

We call it "Gliding Zhuyin" because whatever you do is through gliding.

Draw line to input, and move like a gesture.

Functionality

- Basis: You start from an initial, and drag to a vowel.
- phonemes like "—", "x", "u" are recognized by the middle space through some defined track
- tones are also recognized by track
- words completion(gciv)
