· Next 2 lectures (March 17 & 24) in Delphi

· Homework Q4 - you may include or exclude zero (I include it)

· Production 2 in CSX:

  MemberDecls → FieldDecl MemberDecls

  Need an alternative approach since MemberDecls has no constructor with FieldDecl parameter

Solution - do some AST editing
You have two AST subtrees

One small AST for one field decl

One big AST for all decls to the right of the field decl

Connect them together

NEW FIELDDECLS

MEMBERDECLS

FIELDDECLS
