CS 354 - Machine Organization & Programming
Thursday, September 5, 2024

Week 1 Objectives (at a minimum, student should be able to)

- use **ssh** to connect to their CSL account
- use **cp** to copy files (e.g. .vimrc from /p/course/cs354-deppeler/public/ to ~/.vimrc)
- use **scp** to copy a file from your CSL account to your local computer
- use **scp** to copy a file from your local computer to your CSL account
- use **vim** to create and edit a C program source code file
- use **gcc** to build a Linux executable "program" from a C source file
- run a program that was built from C source code file(s)
- use **gdb** to step through program and examine variable values
- learn and use other Linux C dev tools (commands) as needed
- learn basic C structure and logical control flow statements

Today

Basic C Programming on Linux	

C Logical Control Flow
C Program Structure
Remote Connect to CSL Account
Coding in C Remotely
    Edit your Source
    Compile
    Run/Debug/
    Submit
	Try more Linux commands
	
	Next Week:
	Pointers and 1D arrays

NextWeek

Topics: Finish C Program Structure and Control, Variables & Pointers
Review:
    K&R Ch. 2: Types, Operators, and Expressions
                    variable names, data types, constants, declarations
                    arithmetic/relational/logical operators, assignment, precedence
    K&R Ch. 3: Control Flow
                    statements & blocks, if-else & else-if, switch, while, for, do-while
    K&R Ch. 4: Functions & Program Structure
                    basics, parameters, return values, scope rules
Do: read course "Information and Policies" pages linked to course website
        access CS Linux lab computers, try Linux commands and tools (vim, gcc, gdb, man)
        check out course Piazza site

C Logical Control Flow

Sequential

executionstarts in main(), flows top to bottom, does one statement after another

Selection

→ Which value(s) means true?   `true`   42   -17   0   '0'   NULL   '\0'

→ What is output by this code when `money` is 11, -11, 0 ?

```
if (money = 0)       printf("you're broke\n");
else if (money < 0) printf("you're in debt\n");
else                printf("you've got money\n");
```

→ What is output by this code when the date is 10/31?

```
if ( month)
   if (day)
      printf("Happy Halloween!\n");
else
   printf("It's not October.\n");
```

switch
Repetition

```int k = 0;```
```do {```
```   printf("%i\n", k);```
```   k++;```
```} while (k < 11);```
	```int i =0;```
	```while (i < 11) {```
	``` printf("%i\n", i);```
	``` i++;```
	``` }```

```
for (int j = 0; j < 11; j++) {
   printf("%i\n", j);
}
```

C Program Structure

❊ *Variables and functions must be declared before they're used.*

➢ What is output by the following code?

```c
#include <stdio.h>

int bing(int x) {
    x = x + 3;
    printf("bing %d\n", x);
    return x - 1;
}

int bang(int x) {
    x = x + 2;
    x = bing(x);
    printf("BanG %d\n", x);
    return x - 2;
}

int main(void) {
    int x = 1;
    bang(x);
    printf("BOOM %d\n", x);

    return 0;
}
```

Functions

function:

caller function:

callee function:

Functions Sharing Data

argument:

parameter:

pass-by-value (passing in):

return-by-value (passing out):

Remote Connect to your CSL Account

❋ *Use your CSL Linux account and presented tools for all CS 354 programming.*

1. Connect remotely to any CSL Linux Workstation (login to CSL from your laptop)

    a. open your computer's **terminal** application
    b. use **ssh** to secure connect to a Linux network workstation

    `<shell-prompt>:~$`

    shell-prompt: text that precedes the input cursor
    (508) deppeler@vm-instunix-04:~$

    cslogin: your username for CSL workstations. https://apps.cs.wisc.edu/accountapp/
    machine: a physical or virtual machine name on the CSL network
        emperor-01 ... emperor-07
        rockhopper-01 ... rockhopper-09
        royal-01 ... royal-30
        snares-01 ... snares-10
        vm-instunix-01 ... vm-instunix-99
    network: the CSL's network is **cs.wisc.edu**

    c. **ssh**   **@best-linux.cs.wisc.edu**

    Create ~/private/cs354 directory

    Change to your newly created directory

    Create a new directory named projects

    Change to projects directory

    Print Working Directory

EDIT -- Create|edit your C source code file(s)

1. Create new or open existing file in a text-only editor

```
$vim prog1.c
$vimtutor
```

Why vim?

```c
/* File:   input_echo.c
 * Author: Deb Deppeler
 * Desc:   Store and echo the first N characters of user's input.
 * Note:   The newline char \n is replaced by null char \0
 */
#include <stdio.h>
#include <stdlib.h>
#include <string.h>

int N = 8;

int main( int argc, char *argv[] )

   // Create space to save string of characters

   // INPUT: prompt user for input
   printf("Enter a string of chracters: ");

   // INPUT: read keyboard input into input_string variable
   if ( fgets(input_string, N, stdin) == NULL )
      fprintf(stderr, "Error reading %i characters of user input.\n", N);

   // PROCESS: Replace '\n' with '\0'
   int len = strlen(input_string);        printf("len=%d\n",len);
   if ( '\n'==input_string[len - 1] ) {
      input_string[len - 1] = '\0';
      printf("replaced \'\\n\' char at index %i with \'\\0\' \n", len-1);
   }

   // OUTPUT: print CS login to terminal
   printf("First %d chars of your input string: %s\n",len,input_string);

   // RETURN
return 0;
}
```

EXECUTABLEs: BUILD, RUN

2. Compile -- build executable from C source

```
$gcc prog1.c
```

```
$gcc prog1.c -Wall -m32 -std=gnu99 -o prog1
```
-Wall   generate all warnings
    -m32   use x32 ABI application binary interface in Linux (x86-64 with 32 bit pointers)
    -std=gnu99   select c dialect like java for loops
    -o prog1   give output a specific name

3. Run -- run executable (program) from command line

```
$./a.out
```

→ Why a.out?

```
$./prog1
```

4. Debug

1. Add print stmts:
2. Use gdb

Write test harnesses

5. Submit source code not executables Canvas assignment
(scp is required if working from personal computer)

◆ DOWNLOAD your code from CSL network to current directory on your local machine
scp CSLOGIN@best-linux.cs.wisc.edu:/home/CSLOGIN/private/cs354/hello.c .

◆ Hard-Refresh assignment page to make sure submit button is not "stale")
◆ Upload files from your local machine into Canvas submission for assignment
If file upload does not complete, and the page is "stale", close ALL browser windows and re-login to Canvas and refresh your assignment. If past availability date, see Oops option.

Try some Linux File System Commands

command shell

→ How do you?

list the contents of a directory?

show details of each file?
show hidden files in the directory?

get more information about commands?

display what directory you're currently in?

copy a file?

remove a file?

move to another directory?

move "up" a directory?

make a new directory?

remove a directory?

rename a file or directory?
