

1. **Commitment.** I, commit to completing a project as part of Statistics 371 in the Fall 2002 semester. I understand completing this project will likely involve a substantial amount of work over and beyond the work that is part of the regular course curriculum. I am committing to the course project because: (circle one or more response)
- (a) I am taking the course for honors.
 - (b) I am already involved in a research project on campus.
 - (c) I am interested in enriching my learning of statistics.
 - (d) I expect to need extra credit for a higher grade.
2. **Project team.** List the names of other students in the course with whom you wish to work on the project. If you are willing to be part of a team but don't know with whom you might work, indicate this. If you are certain you wish to work independently, indicate this as well.
3. **Project Topic.** If you already know what topic you wish to investigate as part of the project, indicate that here. For example, describe briefly the scientific question of interest. If you have a rough idea of the kind of topic in which you would have interest, but you don't have a specific question determined, indicate this. For example, you might indicate that you would like to do a project involving plant growth.
4. **Resources.** If you will gather data as part of research you are doing elsewhere on campus, indicate the name of the professor whose lab you will be using. If you are interested in a Science House project using FastPlants, indicate this here. If you will conduct an experiment on your own, indicate how you plan to obtain the necessary materials.
