---

### Computer Sciences Department, UW-Madison Graduate Research Assistant

January 2015-Present

- Collaborating with Vikas Singh and others on machine learning and computer vision research projects, continuing with applications in modeling preclinical development of Alzheimer's disease with the Wisconsin Alzheimer's Disease Research Center.
- Research focuses on problems of Selection in Machine Learning: Which features, samples, or models are minimally sufficient or important based on a specified measure of interest (accuracy, fairness, model size, etc.)?

### American Family Insurance Enterprise: Machine Learning Intern

Madison, WI May 2021 - May 2022

- Created a fairness toolbox for understanding and accounting for unfairness and bias in large datasets and machine learning models.
- Worked with ML team members to understand and deploy fair deep learning methods and models.
- Developed new methods for fairness regularization via high-dimensional Earth Mover's Distance formulations, concluding in NeurIPS conference submission.

### Biostatistics and Medical Informatics Department, UW-Madison Research Fellow

August 2016 - August 2019

- Collaborated with Michael Newton and Sterling Johnson, specifically on developing and applying methods for the analysis of medical imaging data in collaboration with the Wisconsin Alzheimer's Disease Research Center.

### Continental Automotive Systems Business Unit Transmission: Embedded Software Engineering Intern

Deer Park, IL May - August 2013

- Developed an application to systematically test multiple features of a transmission control module in parallel asynchronously using NI LabView and NI bench-testing hardware.
- Identified known bugs from previous software releases through extended test runs.
- Gained extensive knowledge of automated testing and embedded software systems.
