Scalar Operations, Binary Code

• x + y is x + y. • x - y is x - y. • x * y is xy. • x / y and $y \setminus x$ are $\frac{x}{y}$. • $x ^ y$ is x^{y} . Vector Operations

Matrix Operations

Scalar Operations, Unary

- sqrt(x) is \sqrt{x} .
- exp(x) is e^x .
- log(x) is natural log or ln(x), log10(x) is $log_{10}(x)$.
- sin(x) with x in radians, sind(x) with x in degrees, asin(y) is arcsin(y) in radians, asind(x) is arcsin(y) in degrees.
- cos(x), cosd(x), acos(y), acosd(y).
- tan(x), tand(x), atan(y), atand(y).

Vector Operations

Matrix Operations

Scalar Operations, Unary Integer Code

- round(x) is rounding x to nearest integer.
- floor (x) is [x], largest integer $\leq x$.
- ceil (x) is [x], smallest integer $\ge x$.
- mod(x, y) is $x \pmod{y}$, the remainder when x is divided by y, integer division.

Numerical Instability

- The number of decimal places that is displayed can be changed.
- The number of decimal places that can be stored is fixed.
- π, e, √2 etc are approximate values (accurate up to 16 decimal places).
- ② Underflow may occur: numbers that are too close to 0 are stored as ${\bf 0}$.
- Overflow may occur: numbers that are too large are stored as Inf.

Vector Multiplication

•
$$\begin{bmatrix} a \\ b \end{bmatrix} \odot \begin{bmatrix} c \\ d \end{bmatrix} = \begin{bmatrix} ac \\ bd \end{bmatrix}$$
 is the element-wise product.
• $\begin{bmatrix} a \\ b \end{bmatrix} \cdot \begin{bmatrix} c \\ d \end{bmatrix} = \begin{bmatrix} a & b \end{bmatrix} \begin{bmatrix} c \\ d \end{bmatrix} = ac + bd$ is the inner product, also called the dot product for matrices.
• $\begin{bmatrix} a \\ b \end{bmatrix} \otimes \begin{bmatrix} c \\ d \end{bmatrix} = \begin{bmatrix} a \\ b \end{bmatrix} \begin{bmatrix} c & d \end{bmatrix} = \begin{bmatrix} ac & ad \\ bc & bd \end{bmatrix}$ is the outer product.

Vector Multiplication

- Suppose M and W are two row vectors having the same size.
- M : * W is the element-wise product $M \odot W$.
- M * W' and dot(M, W) are the inner product $M \cdot W = MW^T$.
- M' * W is the outer product $M \otimes W = M^T W$.

Vector Operations

Matrix Operations

General Vector Operations

- Suppose *M* and *W* are two row vectors having the same size, and *c* is a scalar.
- M + W and M W are element-wise and also vector addition and subtraction.
- *M*. *W* and *M*. *c* are element-wise exponentiation.

General Vector Operations, Unary Code

- Most of the built-in unary operations are element-wise when applied to vectors.
- For example, the square root function can be applied element-wise to vectors directly.

• sqrt ([a b c]) is
$$\left[\sqrt{a} \quad \sqrt{b} \quad \sqrt{c}\right]$$
.

2 [a b c]
$$\hat{}$$
 0.5 is also $\left[\sqrt{a} \quad \sqrt{b} \quad \sqrt{c}\right]$.

(a b c) $\hat{} 0.5$ results in an error.

Matrix Multiplication

•
$$\begin{bmatrix} a & b \\ c & d \end{bmatrix} \odot \begin{bmatrix} e & f \\ g & h \end{bmatrix} = \begin{bmatrix} ae & bf \\ cg & dh \end{bmatrix}$$
 is the element-wise product
• $\begin{bmatrix} a & b \\ c & d \end{bmatrix} \begin{bmatrix} e \\ f \end{bmatrix} = \begin{bmatrix} ae + bf \\ ce + df \end{bmatrix}$ and
 $\begin{bmatrix} e & f \end{bmatrix} \begin{bmatrix} a & b \\ c & d \end{bmatrix} = \begin{bmatrix} ea + fc & eb + fd \end{bmatrix}$ are matrix products.
• $\begin{bmatrix} a & b \\ c & d \end{bmatrix} \begin{bmatrix} e & f \\ g & h \end{bmatrix} = \begin{bmatrix} ae + bg & af + bh \\ ce + dg & cf + dh \end{bmatrix}$ is also the matrix product.

Matrix Multiplication

- Suppose *M* and *W* are two matrices.
- M :* W, when M and W have the same size, is the element-wise product $M \odot W$.
- *M* * *W*, when number of columns of *M* is the same as the number of rows of *W*, is the matrix product *MW*.

▲□▶ ▲□▶ ▲□▶ ▲□▶ ■ ● ●

General Matrix Operations, Binary

- Suppose M and W are two matrices, and c is a scalar.
- M + W and M W are element-wise and also matrix addition and subtraction.
- M : * W is element-wise, and M * W is matrix multiplication.
- M./W and W.\ M are element-wise, and M / W and W \ M find the matrix X such that MX = W, the solution of systems of linear equations. More details in a later lecture.
- *M* . ^ *W* and *M* . ^ *c* are element-wise, and *M* ^ *c* is matrix exponentiation.

General Matrix Operations, Unary

- Most of the built-in unary operations are element-wise when applied to matrices.
- For example, the square root function can be applied element-wise to matrices directly.

• sqrt ([a b; c d]) is
$$\begin{bmatrix} \sqrt{a} & \sqrt{b} \\ \sqrt{c} & \sqrt{d} \end{bmatrix}$$
.
• [a b; c d] $\hat{}$ 0.5 is also $\begin{bmatrix} \sqrt{a} & \sqrt{b} \\ \sqrt{c} & \sqrt{d} \end{bmatrix}$.
• [a b; c d] $\hat{}$ 0.5 is the actual square root of the matrix, it finds a matrix $\begin{bmatrix} e & f \\ g & h \end{bmatrix}$ such that $\begin{bmatrix} e & f \\ g & h \end{bmatrix} \begin{bmatrix} e & f \\ g & h \end{bmatrix} = \begin{bmatrix} a & b \\ c & d \end{bmatrix}$
