### Bridge and Torch Game

Motivation

 Four people with one flashlight (torch) want to go across a river. The bridge can hold two people at a time, and they must cross with the flashlight. The time it takes for each person to cross the river:

Α	В	С	D
1	2	4	5

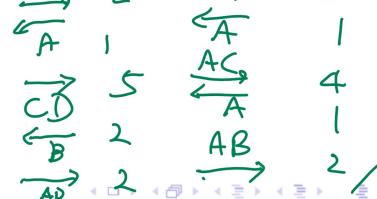

What is the minimum total time required for everyone to cross

the river?

• A: 10, B: 11, C: 12, D: 13, E: 14

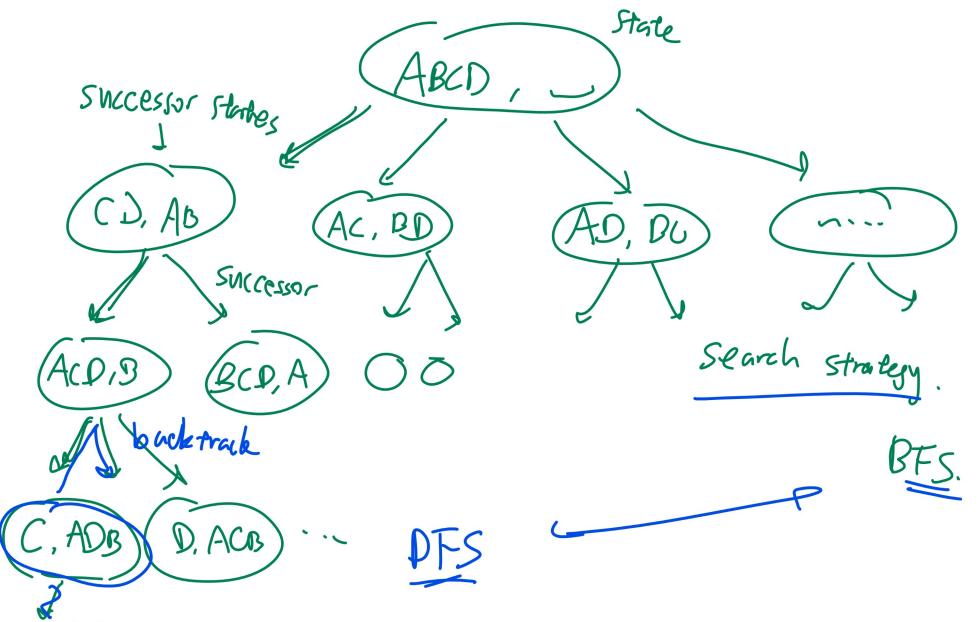

### Due Dates and Grades Admin

- Next Monday: M8, M9, P4
  Next, next Monday: M10, M11, P5
- Next, next Thursday and Friday: exams

### Bridge and Torch Game States

Motivation

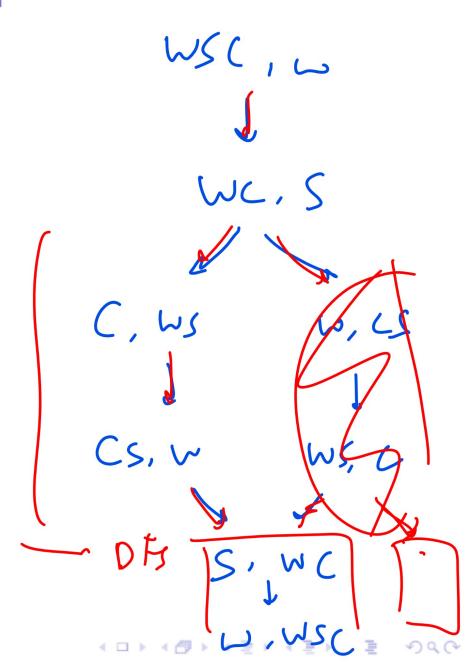

### Search Problem Applications

Motivation

- Puzzles and games.
- Navigation: route finding.
- Motion planning.
- Scheduling.

Motivation

## Sizes of State Space

Motivation

• Tic Tac Toe: 10<sup>3</sup>
• Checkers: 10<sup>20</sup>
• Chess: 10<sup>50</sup>
• Go: 10<sup>170</sup>

## Water Jugs Example Definition

#### Performance

#### Definition

- A search strategy is complete if it finds at least one solution.
- A search strategy is optimal if it finds the optimal solution.
- For uninformed search, the costs are assumed to be 1 for all edges c=1.

## Complexity

#### Definition

- The time complexity of a search strategy is the worst case maximum number of vertices expanded.
- The space complexity of a search strategy is the worst case maximum number of states stored in the frontier at a single time.
- Notation: the goals are d edges away from the initial state.
   This means assuming a constant cost of 1, the optimal solution has cost d. The maximum depth of the graph is D.
- Notation: the branching factor is b, the maximum number of actions associated with a state.

$$b = \max_{s \in V} \left| s'\left(s\right) \right|$$

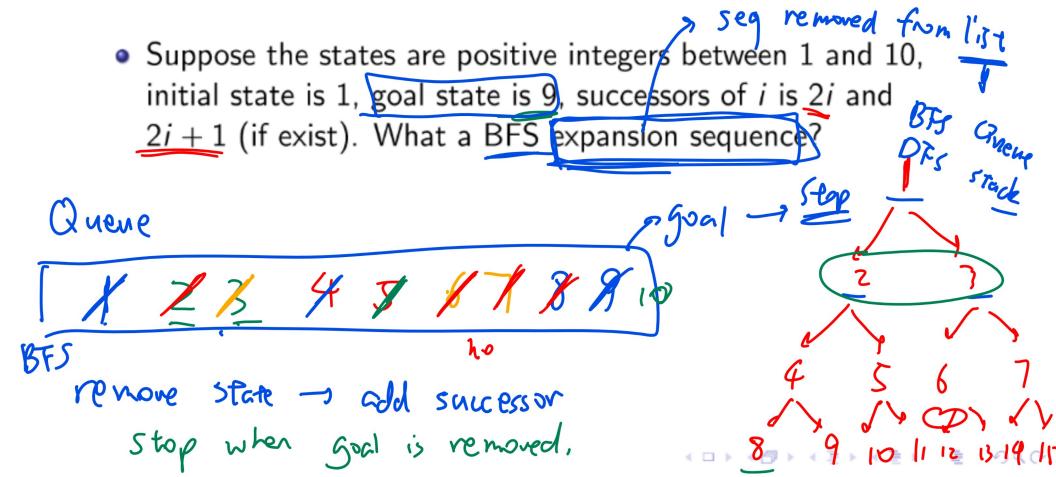

#### Breadth First Search

Description

- Use Queue (FIFO) for the frontier.
- Remove from the front, add to the back.

## BFS Example 1

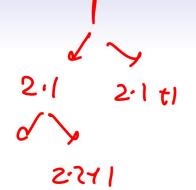

Quiz

## BFS Example 2

Quiz

• Suppose the states are integers between 1 and  $2^{10} = 1024$ .

The initial state is 1, and the goal state is 1024. The successors of a state i are 2i and 2i + 1, if exist. How many 1 5

B : 11

• C:12

D:1023

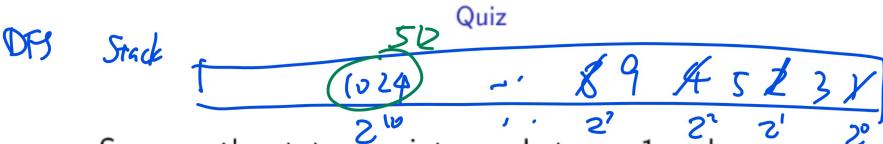

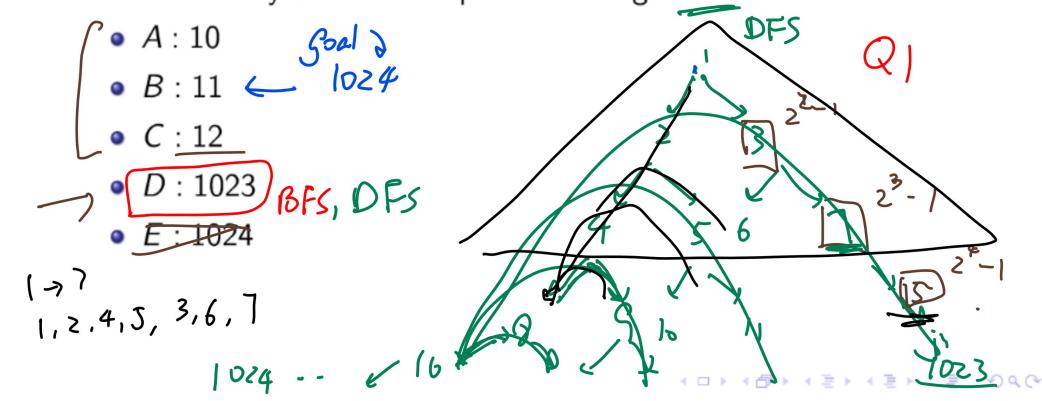

2.5

Court 5001 (tested being expanded

## BFS Example 3

• Suppose the states are integers between 1 and  $2^{10} - 1 = 1023$ . The initial state is 1, and the goal state is 1023. The successors of a state i are 2i and 2i + 1, if exist. How many states are expanded during a BFS search?

#### Breadth First Search Performance

Discussion

BH

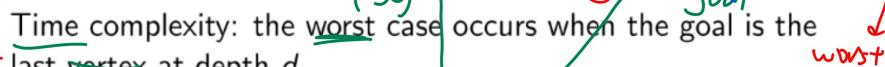

Querre

- BFS is complete.
  BFS is optimal with c = 1.

Breadth First Search Complexity

death D

last vertex at depth d.

rode/state

$$T = b + b^2 + \dots + b^d$$

 Space complexity: the worst case is storing all vertices at depth d is in the frontier.

BF

Queur

### Depth First Search

Description

- Use Stack (LIFO) for the frontier.
- Remove from the front, add to the front.

## DFS Example 1 Quiz

Suppose the states are positive integers between 1 and 10, initial state is 1, goal state is 9, successors of i is 2i and 2i + 1 (if exist). What a DFS expansion sequence?

# DFS Example 1 Diagram

## DFS Example 2

Quiz

- Suppose the states are integers between 1 and  $2^{10} = 1024$ . The initial state is 1, and the goal state is 1024. The successors of a state i are 2i and 2i + 1, if exist. How many states are expanded during a DFS search?
- A: 10
- B:11
- C:12
- D: 1023
- E: 1024

## DFS Example 3

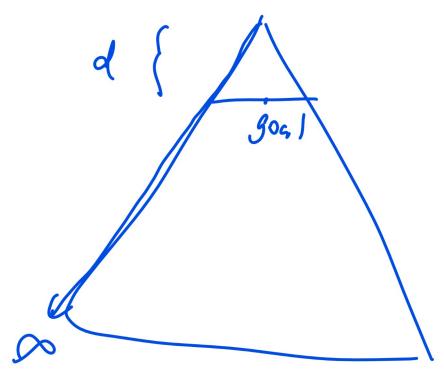

Quiz

- Suppose the states are integers between 1 and  $2^{10} 1 = 1023$ . The initial state is 1, and the goal state is 1023. The successors of a state i are 2i and 2i + 1, if exist. How many states are expanded during a DFS search?
- A: 10
- B:11
- C:12
- D: 1023
- E: 1024

## Depth First Search Performance

Discussion

- DFS is incomplete if  $D = \infty$ .
- DFS is not optimal.

Depth First Search Complexity

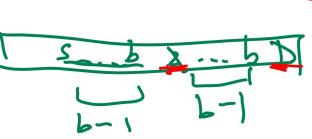

1 + b + b + ... b

 Time complexity: the worst case occurs when the goal is the root of the last subtree expanded in the whole graph.

$$T = b^{D-d+1}... + b^{D-1} + b^{D} +$$

 Space complexity: the worst case is storing all vertices sharing the parents with vertices in the current path.

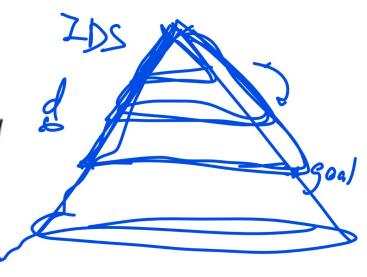

## Iterative Deepening Search

Description

Space Japan DPS 7 fast Von

- DFS but stop if path length > 1
- repeat DFS but stop if path length > 2
- ...

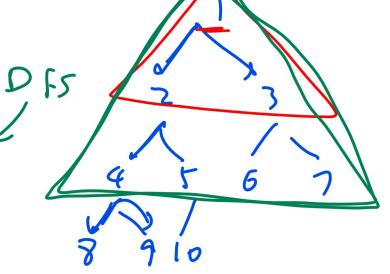

repeat DFS but stop if path length > d

## IDS Example 1

Suppose the states are positive integers between 1 and 10, initial state is 1, goal state is 9 successors of i is 2i and 2i + 1 (if exist). What a IDS expansion sequence?

Level 0; 1 ovel 1, 1, 2, 3 1 level 2, 1, 2, 4, 5, 3, 6, 7 1 level 3: 1, 2, 4, 8, 9

# IDS Example 1 Diagram

## Iterative Deepening Search Performance

Discussion

- IDS is complete.
- IDS is complete.
  IDS is optimal with c = 1.

Iterative Deepening Search Complexity

Discussion

 Time complexity: the worst case occurs when the goal is the last vertex at depth d.

$$T = db + (d-1)b^{2} + \dots + 3b^{d-2} + 2b^{d-1} + 1b^{d}$$

Space complexity: it has the same space complexity as DFS.

$$S = (b-1) d^{-1}$$

## Configuration Space

Discussion

### Summary

#### Discussion

- Search:
- Uninformed: Breadth first search → Add states at the end → Remove states from the front → Complete + Optimal.
- 2 Uninformed: Depth first search  $\rightarrow$  Add states to the front  $\rightarrow$  Remove states to the front  $\rightarrow$  Incomplete + Not optimal.
- **3** Uninformed: Itervative deepening search  $\rightarrow$  DFS with depth limits 1, 2, ...  $\rightarrow$  Complete + Optimal.
- Informed: Uniform cost search
- Informed: Best first greedy search √\_
- Informed: A search
- Informed: A star search
